## Electricity Reform in Europe: Towards a Single Energy Market

The realization of a European internal market for energy is still a work in progress. Written by leading European scholars and discussed with major energy stakeholders, this book presents a thorough analysis of the motives and methods needed to achieve a single European energy market. The authors discuss the critical issues surrounding an internal European energy market including: market design, competition and market power, sustainable energy versus the market, regulation and harmonization, benchmarking and indicators, modeling of competition, market prices and energy forecasts. They provide a multi-disciplinary assessment of the 'best way' to build the market base of a future European energy policy. "Electricity Reform in Europe" will be of great interest to decision makers and managers in the energy industry or business sector as they will be able to see the whole European energy policy 'picture' beyond their own corporate interests. The book will also appeal to national and European energy administrations, regulatory bodies and policy makers providing a synthesis of all relevant policy issues.
